# Intercrete<sub>®</sub> 4820

### **Pore Filler & Screed**

| PRODUCT<br>DESCRIPTION       A single component, water-based (VOC-free), polymer modified, fibre reinforced, cementitious<br>engineering quality mortar.         Intercrete 4820 has high adhesive and waterproofing properties, resistance to acid gases,<br>chlorides, freeze/thaw cycles and enhanced chemical resistance.         INTENDED USES       Designed as an engineering quality fairing coat and render for filling minor blow-holes and surface<br>defects and as a levelling screed to provide a fair-faced finish and reinstate cover.         CE-marked in accordance with BS EN 1504-3, Class R4. Suitable for repair methods 3.1, 3.3, 7.1,<br>7.2 as defined in BS EN 1504-3.         PRACTICAL<br>INFERCRETE 4820       Density         Density       1860kg/m³ (116lb/ft²)         Typical Thickness       3 millimetres (120 mils) to 6 millimetres (240 mils) dry thickness. Can be<br>feather-edged.         Practical Coverage       On prepared substrates, a 25kg pack will cover approximately 5m² at 3mm<br>thickness. FORMERLY FLEXCRETE MONOLEVEL 844SP

#### COMPLIANCE AND CERTIFICATION

When used as part of an approved scheme, this material has the following certification:

• Suitable for repair methods 3.1, 3.3, 7.1, 7.2 as defined in BS EN 1504-3.

· Compliant with LU Standard 1-085 'Fire Safety Performance of Materials'.

• Compliant with Highways Agency Standard BD27/86 for the repair of Highway Structures

• Listed under Regulation 31 – England and Wales; Regulation 33 – Scotland; Regulation 30 - NI, for use with potable water. WRAS Approved for use with potable water.

| mercre                                      |  |  |  |  |  |
|---|--|--|--|--|--|
| Pore Filler & Sc<br>SPECIFICATION<br>CLAUSE | •  |  |  |  |  |
|   | <ul> <li>Compressive strength at 20°C (68°F) of at least 23MPa in 1 day and 60MPa in 28 days.</li> <li>Impermeable to water under 10 bar hydrostatic pressure such that 1mm of mortar is equivalent to 1000mm of concrete.</li> <li>Flexural strength at 28 days (20°C, 65% RH) of at least 10.5MPa in accordance with EN 196-1.</li> <li>Oxygen diffusion coefficient to be no greater than 2.72 x 10<sup>4</sup> cm<sup>2</sup>/sec.</li> </ul>  |  |  |  |  |
| SURFACE<br>PREPARATION                      | <b>Concrete</b><br>Concrete should have a minimum strength of 20MPa. All surfaces should be clean and free from laitance, curing compounds, release agents, efflorescence, grease, oil, dirt, organic growth, old coatings and loose or disintegrating concrete. Smooth surfaces should be roughened, using high pressure water jetting or similar techniques. The prepared substrate should be thoroughly soaked with clean water until uniformly saturated without any standing water.   |  |  |  |  |
|   | <b>Steel Reinforcement</b><br>All exposed steel reinforcement should be treated with 2 x 1mm (40 mils) coats of Intercrete 4871, applied by brush (see relevant Product Data Sheet for full details). Note; when carrying out repairs in new construction, it is not necessary to fully expose any reinforcing bars.   |  |  |  |  |
| APPLICATION                                 |  |  |  |  |  |
| Mixing                                      | Intercrete 4820 should be mechanically mixed using a forced action pan mixer or in a clean drum using a drill and paddle. A normal concrete mixer is NOT suitable. For normal applications, typically use between 2.8 and 3.2 litres of clean water per 25kg bag of Intercrete 4820. For part bags, use a ratio of 6.5:1 powder to water. Typically, for screeding applications, use 3 litres of clean water per 25kg bag, which gives a water:powder ratio of 0.12. Normal mixing time depends on the type of mixer used; 2-3 minutes is average. Mix so as to entrain as little air as possible and use without delay. |  |  |  |  |
| Work Stoppages /<br>Clean Up                | Do not allow material to remain in hoses, guns or spray equipment. Thoroughly flush all equipment with clean water.  |  |  |  |  |
|   | Clean all equipment immediately after use with clean water. It is good working practice to periodically flush out spray equipment during the course of the working day. Frequency of cleaning will depend upon amount sprayed, temperature and elapsed time, including any delays.   |  |  |  |  |
|   | All surplus materials and empty containers should be disposed of in accordance with appropriate regional regulations/legislation.  |  |  |  |  |

## Intercrete<sub>®</sub> 4820

### Pore Filler & Screed

PRODUCT CHARACTERISTICS

#### Concrete Substrates

Application should only be made in the range 5°C - 40°C (41°F - 104°F). Do not use when the temperature is below 5°C (41°F) and falling. Do not use Intercrete 4820 on waterproof concrete without referring to the Protective Coatings Technical Department.

#### Priming

Intercrete 4820 is highly polymer-modified and as a result, concrete surfaces do not generally need a primer. Highly porous substrates should be primed with the appropriate Intercrete bonding system prior to the application of the repair mortars; contact Protective Coatings Technical Department for further information.

#### Placing

Intercrete 4820 can be applied to localised minor voids and surface defects using a palette knife. For large areas of pore filling, work well into the prepared substrate using a wooden float or 'bag-rubbing' techniques.

When used as a highly alkaline thin screed for the protection of concrete and for structural weatherproofing, Intercrete 4820 should be applied to the prepared substrate using a steel float to provide a smooth, polymer-rich surface finish. An initial thin layer should be worked well into the surface to fill blow-holes and minor defects, prior to building up the thickness to a maximum of 6mm (240 mils). Alternatively, spray techniques can be used.

For repairs which require multi-layer applications, it is important to ensure that previous layers are well keyed and stable but not fully set (2-6 hours dependent on temperature) prior to the application of subsequent layers. No inter-layer priming is required. Once the last layer has stabilized, trowel marks can be removed using a wooden float or damp sponge to produce a surface comparable to emery paper, which provides an excellent finish for the subsequent application of a surface coating.

#### Curing

Normal concreting procedures should be strictly adhered to. It is important that the surface of the mortar is protected from strong sunlight and drying winds with Intercrete 4870, polythene sheeting, damp hessian or similar (see separate Data Sheet for full details).

#### **APPLICATION TIPS**

• During early mixing, the material appears dry. DO NOT add extra water at this stage, as full mixing produces a smooth consistency.

- DO NOT wet out or prime between layers.
- If the mortar thickens, remix but DO NOT add extra water.

• DO NOT over-trowel when applied as a thin screed, otherwise blisters could form in the material, which must be removed.

- · Remove trowel marks using a wooden float or damp sponge once the surface has stabilized.
- · Can be overcoated with Intercrete membranes to give a coloured aesthetic finish.

• Cold Weather Working (See separate Guide): ≥3°C (37°F) on a rising thermometer, ≥5°C (41°F) on a falling thermometer.

• Hot Weather Working (See separate Guide): Store material in cool conditions to maximise working life. Shade applied material from strong sunlight. Spray-apply a second coat of Intercrete 4870. If possible, avoid extreme temperatures by working at night.

#### SAFETY PRECAUTIONS

This product is intended for use only by professional applicators in industrial situations in accordance with the advice given on this sheet, the Safety Data Sheet and the container(s), and should not be used without reference to the Safety Data Sheet (SDS).

All work involving the application and use of this product should be performed in compliance with all relevant national, Health, Safety & Environmental standards and regulations.

If in doubt regarding the suitability of use of this product, consult International Protective Coatings for further advice.

#### **Important Note**

The information in this data sheet is not intended to be exhaustive; any person using the product for any purpose other than that specifically recommended in this data sheet without first obtaining written confirmation from us as to the suitability of the product for the intended purpose does so at their own risk. All advice given or statements made about the product (whether in this data sheet or otherwise) is correct to the best of our knowledge but we have no control over the quality or the condition of the substrate or the many factors affecting the use and application of the product. Therefore, unless we specifically agree in writing to do so, we do not accept any liability at all for the performance of the product or (subject to the maximum extent permitted by law) any loss or damage arising out of the use of the product. We hereby disclaim any warranties or representations, express or implied, by operation of law or otherwise, including, without limitation, any implied warranty of merchantability or fitness for a particular purpose. All products supplied and technical advice given are subject to our Conditions of Sale. You should request a copy of this document and review it carefully. The information contained in this data sheet is liable to modification from time to time to the performance.

This Technical Data Sheet is available on our website at www.international-marine.com or www.international-pc.com, and should be the same as this document. Should there be any discrepancies between this document and the version of the Technical Data Sheet that appears on the website, then the version on the website will take precedence.
